Color Table

Color	Color Name	Master File	Sample File
Spot Colors (8)		0.77%	6.67%
	PANTONE 299 C	0.14%	X
	PANTONE 104 C	0.63%	X
	Varnish Free Area	X	1.41%
	Profile (Non Print)	X	4.4%
	PANTONE Blue 072 CVC	X	0.01%
	PANTONE 355 CVC	X	0.71%
	PANTONE 200 CV	X	0.13%
	Braille	X	0.01%
Process Colors (4)		11.04%	5.76%
	Black	6.95%	5.49%
	Yellow	X	0.09%
	Magenta	2.61%	0.1%
	Cyan	1.48%	0.08%

- Tips:**
1. If your packaging requires only 3 colors or less, then use Pantone colors, it is often cheaper
 2. If your artwork has full-color photographic images, then you ll need CMYK color process
 3. If you are looking for color consistency from job-to-job and printer-to-printer, then you will need Pantone
 4. If your artwork contains very thin lines then Pantone colors are better
 5. If your artwork contains metallic or fluorescent colors then Pantone colors are best
 6. The less colors you use, the less expensive, in most cases

Tips:
 Font or Type size requirements are mandated by many regulatory agencies across industries. These requirements may also be dependent on the size of the Principal Display Panel (PDP). Getting to know which text is in what font size saves a lot of manual checking using rulers and distance measuring methods.

Tips:

Retailers and manufacturers globally use these ISO standards to ensure barcodes can be read consistently — at all stages of the supply chain. This improves efficiency and productivity. An ISO-based verifier (like ManageArtworks) looks at the symbol in the same way that a scanner does, but goes further by grading the symbol's quality. The grade can range from 4-0 (A-F) based on how close the symbol is to perfect. The lower the ISO grade, the higher the possibility of scanning difficulties. The target measurement for all barcodes is ISO Grade 4, but an acceptable grade can be lower.
